

OpenCurve

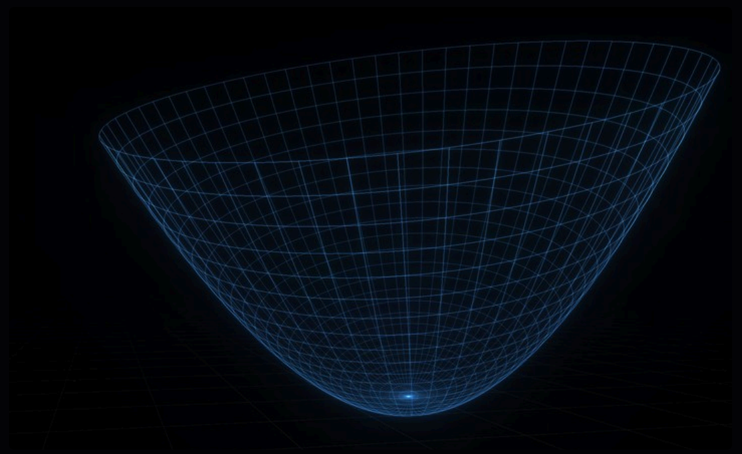

Math, meant to be *seen*.

Torus knot (2, 3)

xuunh.github.io/OpenCurve

Every formula is a *shape* first.

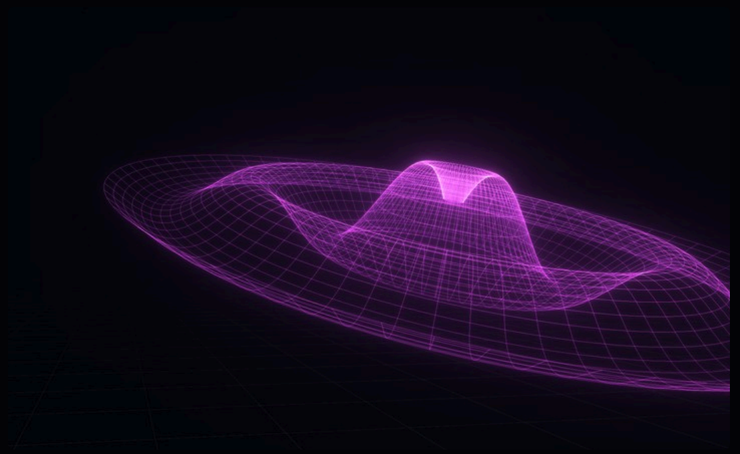

OpenCurve draws the shape, so you can see what the math is doing before you study the steps.

$y = x^2$

The parabola, spun into a dish

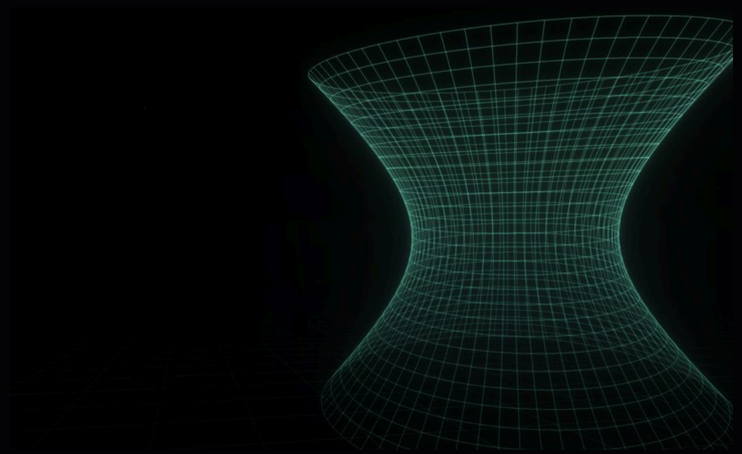

Algebra 2

$z = \cos(r) / r$

A ripple that fades outward

Pre-Calculus

$x^2 + z^2 - y^2/14 = c$

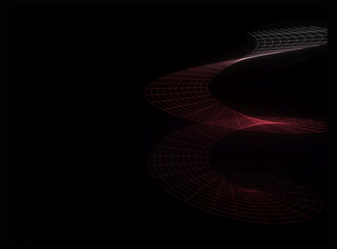

Hyperboloid

Algebra 1

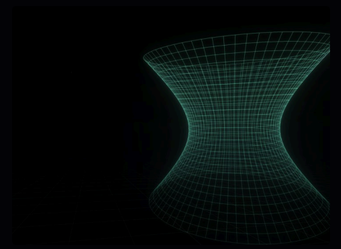

19 subjects. One model each.

From the number line to the Möbius strip, each subject opens on a 3D model drawn from real math.

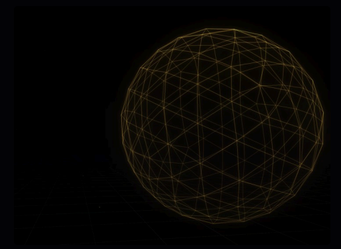

Foundations	01
High school	02-07
College	08-15
Advanced	16-19

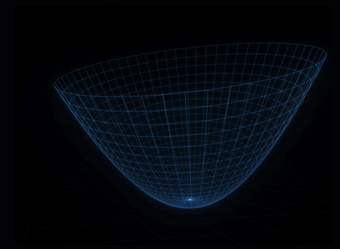

01 Pre-Algebra

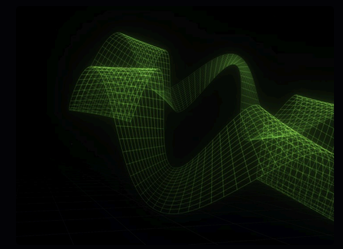

02 Algebra 1

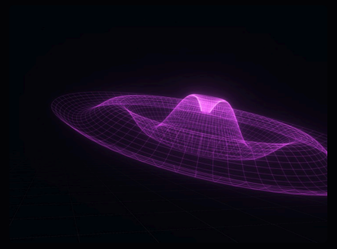

03 Geometry

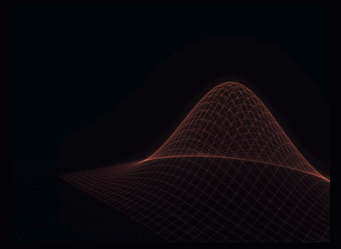

04 Algebra 2

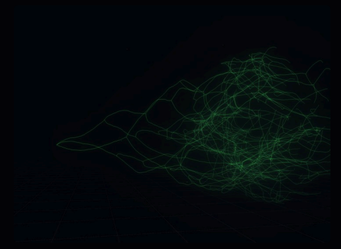

05 Trigonometry

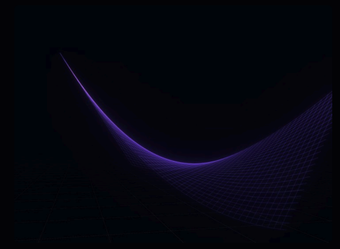

06 Pre-Calculus

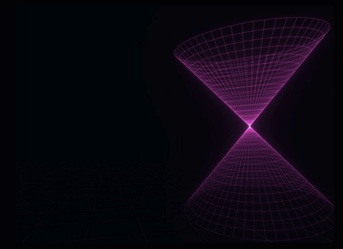

07 Statistics

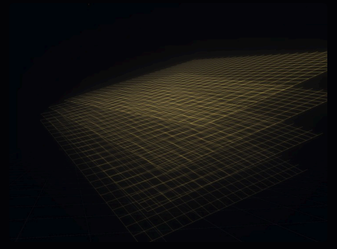

08 Probability

09 Calculus 1

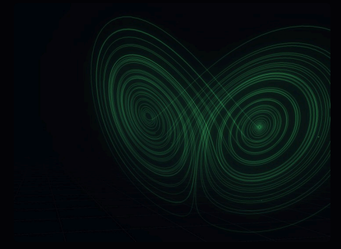

10 Calculus 2

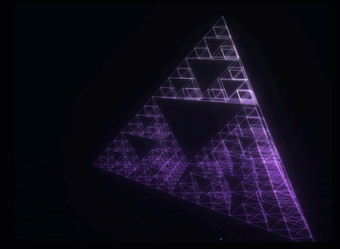

11 Linear Algebra

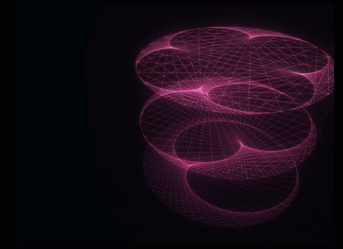

12 Calculus 3

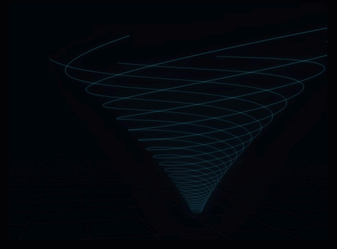

13 Differential Equations

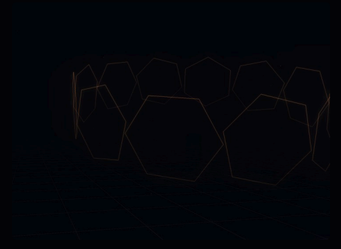

14 Discrete Math

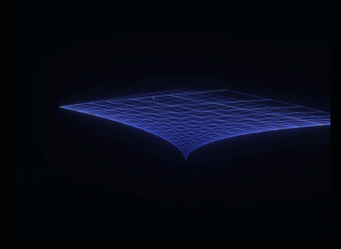

15 Number Theory

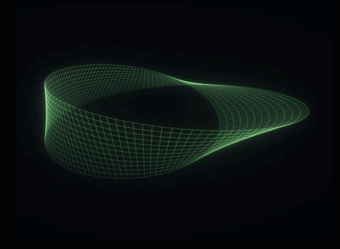

16 Real Analysis

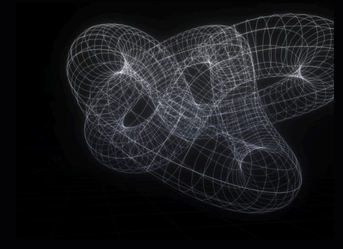

17 Abstract Algebra

18 Complex Analysis

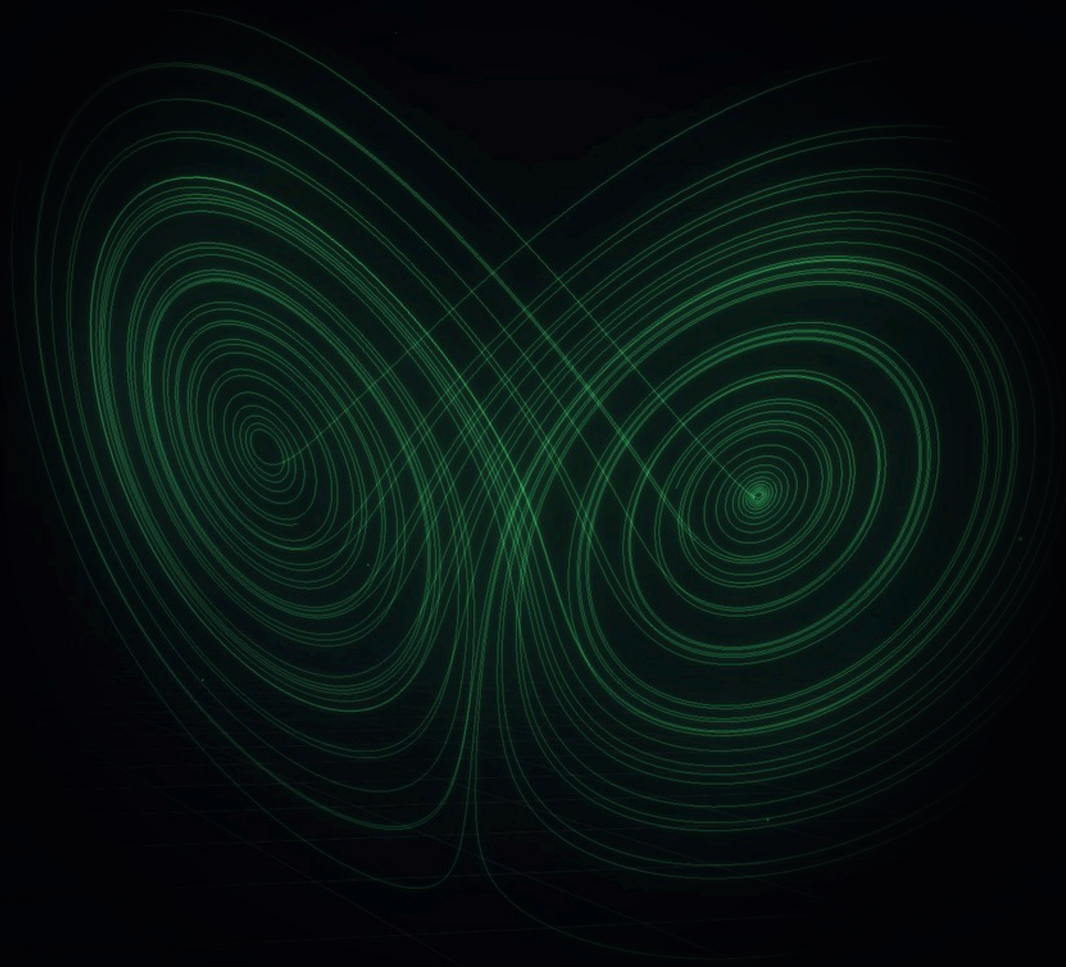

19 Topology

00 Torus knot (cover)

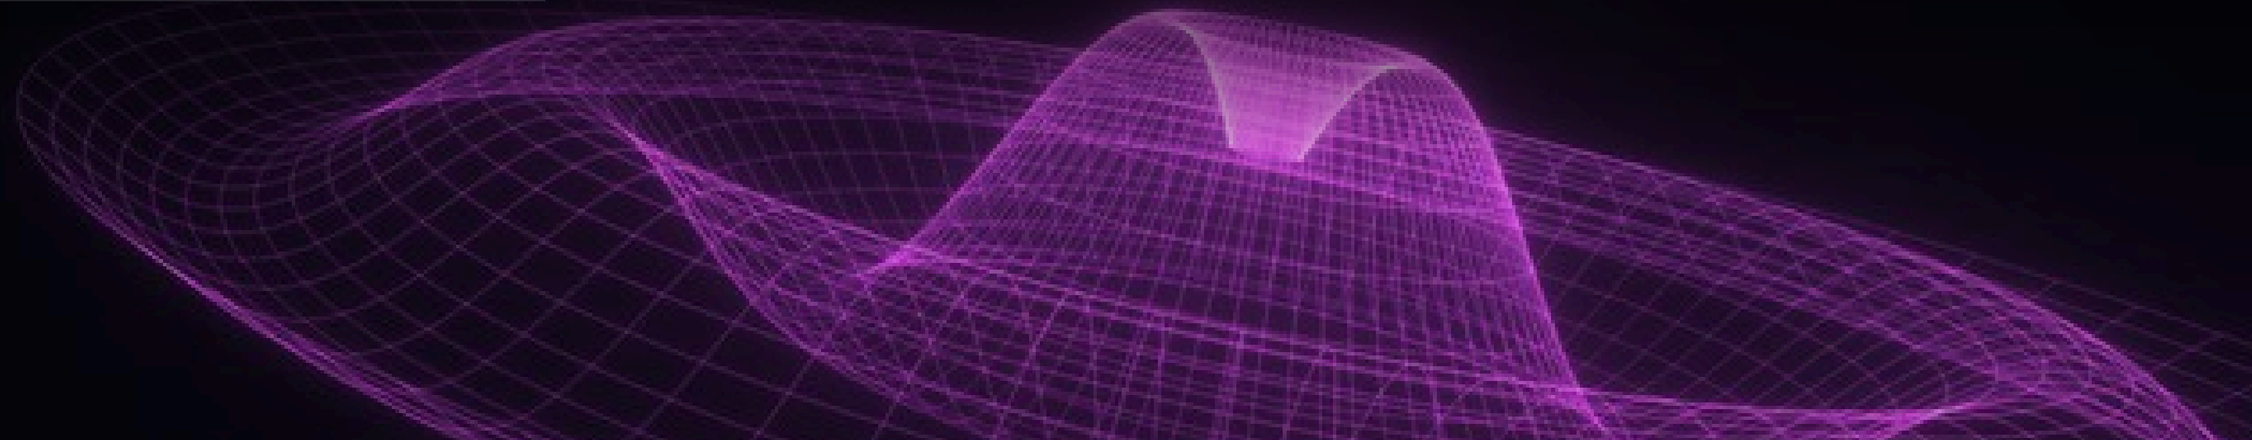

Every model moves. *Look around.*

01	SCROLL	Travel one subject at a time
02	MOVE	Tilt the view with the mouse
03	INDEX	Jump to any subject

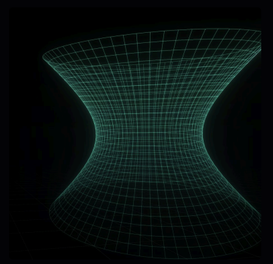

Made for anyone who struggles to *picture* math.

WHO	WHERE	WHAT IT TAKES
Students Middle school to college	Laptops	A web browser
Tutors	Chromebooks	No account, no install
Teachers	Classroom projectors	Free

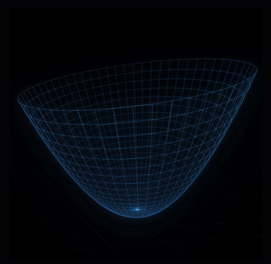

Built one topic *at a time.*

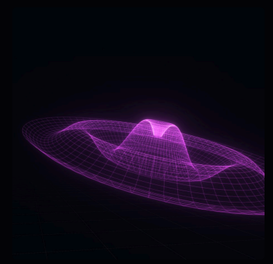

NOW — 3 SUBJECTS

Algebra 1

Algebra 2

Pre-Calculus

Topics inside these subjects are being built first.

NEXT — 16 SUBJECTS

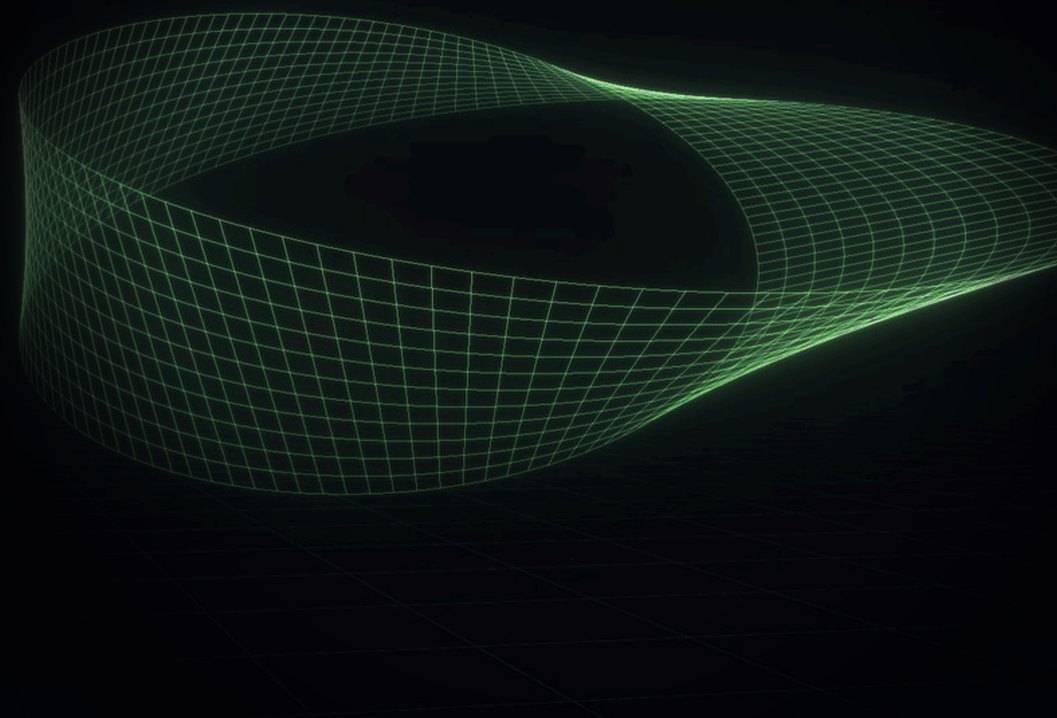

Every other subject already has its model. Topics follow, one at a time.

Pre-Algebra · Geometry · Trigonometry · Statistics · Probability · Calculus 1-3 · Linear Algebra · +7 more

ALWAYS — OPEN

Anyone can report a math mistake or suggest a topic on GitHub, and every fix is public.

Free to use, share, and build *on*.

BUILT WITH

Three.js

Geist, Geist Mono and Instrument Serif

One HTML file, no build step
